

Missing Trade Investigation Checklist

A front-to-back checklist for tracing a missing or broken trade across systems — from execution to settlement.

THE TRADE Instrument _____ Venue _____ Quantity _____ Order ID _____

Freeze the identity before opening a second system.

1 TRADE IDENTITY

- ☐ Date, instrument, venue, side, quantity confirmed
- ☐ Order ID and execution ID(s) captured

2 IDENTIFIER MAPPING

- ☐ Order → execution → trade → clearing → settlement IDs linked
- ☐ Cross-reference confirmed across every system

3 QUANTITY RECONCILIATION

- ☐ Ordered vs executed vs booked vs settled compared
- ☐ Gap quantity identified and isolated

4 LAST PROVEN SUCCESS

- ☐ Last stage with confirmed evidence identified
- ☐ Evidence type recorded (report, ack, timestamp)

5 FIRST FAILED HANDOFF

- ☐ Next expected record checked and named
- ☐ Missing, rejected or held record identified

6 ROOT CAUSE

- ☐ Rejection reason or error message captured
- ☐ Cause classified: data, mapping, config, timing

7 REPAIR ACTION

- ☐ Fix applied — correction, replay or mapping update
- ☐ Duplicate risk checked before any replay

8 OWNER

- ☐ Business and technical owner named
- ☐ Ownership confirmed, not assumed

9 PREVENTION STEP

- ☐ Validation or monitoring added at the break point
- ☐ Related trades checked for the same gap

10 CLOSURE EVIDENCE

- ☐ Downstream processing verified end to end
- ☐ Business decision recorded, not just "fixed"

THREE QUESTIONS THAT FIND THE BREAK

What proved the last success?

What was the first expected record that's missing?

Why did that handoff fail?

THE BIG IDEA

A missing trade isn't solved by searching harder in one system.

It's solved by finding the first broken handoff between systems.
